

SSRI/SNRI Acknowledgement

Date: _____ Patient: _____

Patient has been warned against the potential risk associated with serotonin syndrome, which could occur with the combined usage of an SSRI or SNRI (that increases serotonin and norepinephrine) in conjunction with stimulants and/or NDRIs (both of which increase norepinephrine and dopamine). Potential side effects included but not limited to akathisia, tremors, altered mental status, agitation, and hyperthermia. Risk and benefits must always be considered with any medication treatment plan and by signing off on this agreement you, the patient, have agreed that the benefits out way the risk.
