

Hypertension in the United States

The Silent Epidemic

Prevalence in the United States:

About **75 million American adults (32%)** have high blood pressure—that's **1 in every 3 adults**.

Only about **half (54%)** of people with high blood pressure have their condition under control.

These numbers are often considered **underreported** – as many as 1 in 5 adults may be unaware that they have hypertension

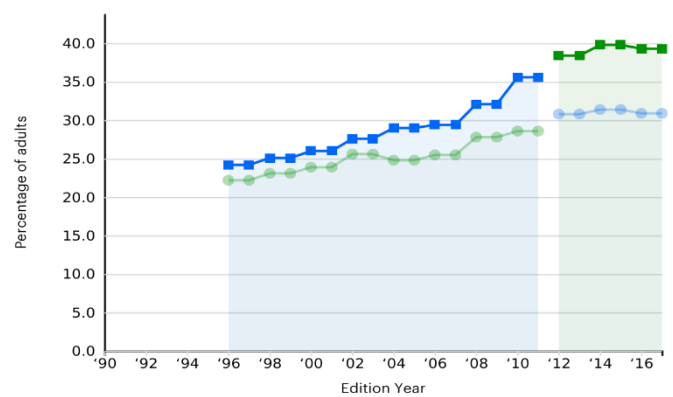

High blood pressure costs the nation **\$48.6 billion** each year. This total includes the cost of health care services, medications to treat high blood pressure, and missed days of work.

High blood pressure was a primary or contributing cause of death for more than **410,000 Americans** in 2014—that's more than **1,100 deaths each day**.

Prevalence in Louisiana:

Louisiana continues to struggle with hypertension – **39.3%** of adults in Louisiana are hypertensive.

Louisiana ranks **tied for 4th** in the nation for rates of hypertension in adults.

■ Percentage of adults who reported being told by a health professional that they have high blood pressure (pre-2011 BRFSS methodology)

■ Percentage of adults who reported being told by a health professional that they have high blood pressure

■ Louisiana

Louisiana Community Health Centers

2016 Hypertension Outcomes

28% of Community Health center patients in Louisiana suffered from hypertension.

64,000 of those patients were controlled (sBP <140 mmHg) by then end of 2016. That's **60%** of all hypertensive patients seen by Louisiana Community Health Centers!

Four Community Health Centers achieved blood pressure control at rates at or above the Million Hearts® target of 70 percent.
